DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Dessau et al (5,939,597).

Dessau discloses a process of methylation of toluene in the presence of a catalyst containing MCM-22 and phosphorus (the abstract; col. 4, lines 39-45; col. 5, lines 34-36).

Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Degnan et al (5,536,894).

Degnan discloses a process of alkylation of an aromatic such as benzene with ethylene or propylene in the presence of a catalyst containing MCM-56 and phosphorus (the abstract; col. 10, lines 28-67; col. 14, lines 7-11).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person

Art Unit: 1764

having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claim 6 is rejected under 35 U.S.C. 103(a) as being unpatentable over Degnan et al (5,536,894) in view of Cheng et al (5,557,024).

Degnan discloses a process as discussed above.

Degnan appears to be silent as to the phase of the alkylation (see the whole patent to Degnan). However, Cheng discloses that an alkylation in the presence of a MCM-56 catalyst can be operated in gas or liquid phase (the abstract; col. 12, lines 29-34).

It would have been obvious to one having ordinary skill in the art at the time the invention was made to have modified the process of Degnan by operating a liquid-phase

Art Unit: 1764

alkylation process to arrive at the applicants' claimed process since it is expected that alkylation processes operated in the liquid or gas phase yield similar results.

Response to Arguments

Applicant's arguments filed on 2/18/2003 have been fully considered but they are not persuasive.

The argument that the catalyst of example 15 of Degnan was prepared for use in catalytic cracking with phosphorus added is not persuasive since on column 14, lines 7-11, Degnan discloses the MCM-56 containing phosphorus. In the abstract, Degnan disclose MCM-56 catalyst is an aromatic alkylation catalyst.

The argument about the temperature disclosed by Degnan is not appropriate since no limitation of temperature is recited in the present claims.
